An armillary sphere sundial designed for Taylor Wimpey,

The 1,500mm diameter rinds were fabricated in 316 stainless steel by Twin Engineering of Milton Keynes and installed by the client.

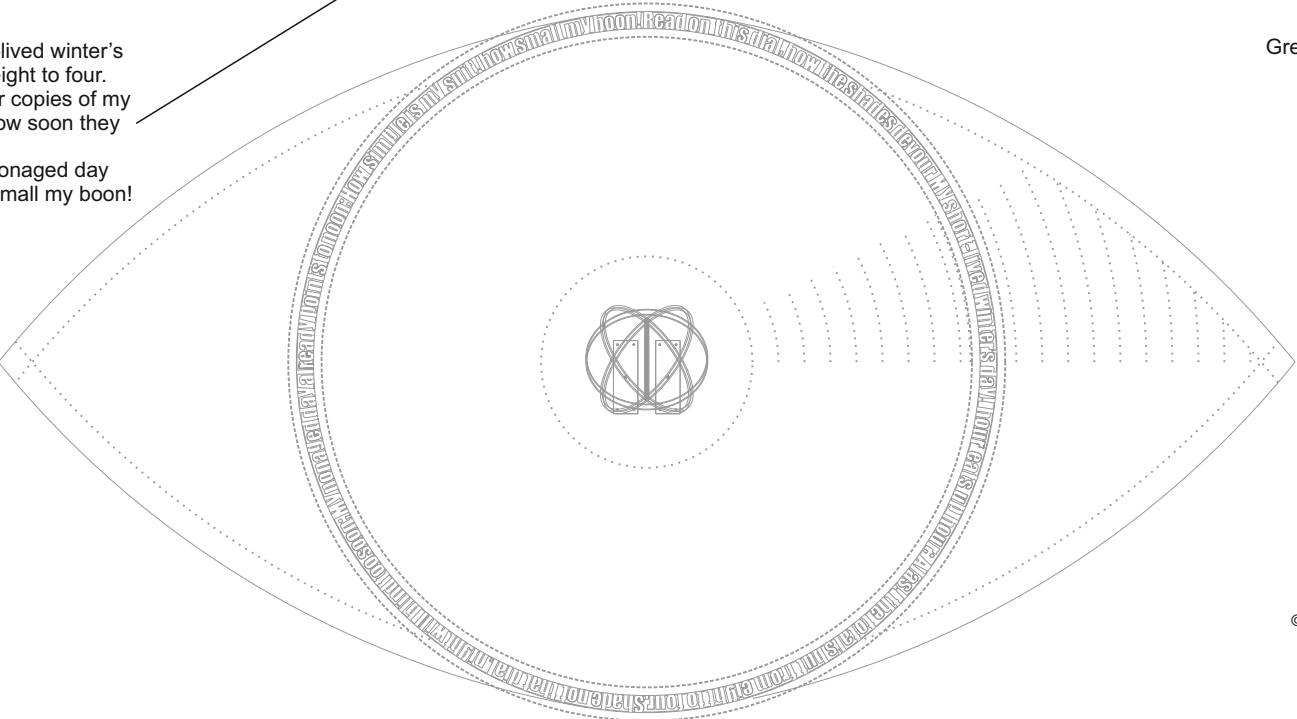

The armillary ring is CNC laser- cut, with British Summertime in roman numerals around the top edge, Greenwich Mean Time around the bottom.

The complimentary lettering around the dial is also laser cut in brushed 316 in sections, to be assembled around the tumbled concrete setts.

Read on this dial, how the shades devour My short-lived winter's day! hour eats up hour; Alas! the total's but from eight to four. Behold these lilies, which Thy hands have made Fair copies of my life, and open laid To view, how soon they droop, how soon they fade!

Shade not that dial, night will blind too soon; My nonaged day already points to noon; How simple is my suit! how small my boon!

Greenwich Mean Time   British Summer Time   Gnomon   Shadow
